# **INTRO**

Raven has been established by people devoted to snowboarding. Born in the heart of people for whom snowboarding is a passion, focus and life style. We remain true to snowboarding, and we thank you all for the support so we can continue to do so.

Our goal is to develop the best value for money boards on the market. We believe that the quality is something you can not replace with anything else. That is why we decided our boards to be produced in Europe in one of the world's leading factories – NBL Sport. All our boards are 100% hand made. This is what makes our boards so unique and ensures maximum performance and superior quality.

Another thing which makes our boards unique is the fact that most companies throw a middle-of-the-road board together and call it "all-mountain" because it's nonspecific, but ours are specifically designed to tame any terrain. If you drop cliffs and crush giant tables all in the same run, our boards will be definitely the best choice for you.

### **SNOWBOARDS TECHNOLOGIES**

#### **POPLAR WOOD CORE**

Super strong, super light, low moisture ratio core. You may believe us or not but we really do control precisely every single tree before it's changed into vertically laminated wood strips. This ensures each board has exactly the same amount of pop and flex. The German glue used for gluing the wood strips is made of only the best natural components and this is the reason why our boards never

#### **ABS SIDEWALL**

Sidewall structure is responsible for the power to the edges. It also supports and reinforces the top edge and absorbs shocks. In order to better protect the core against external damages and penetrating the moisture into the core, our sidewalls are made only from the best quality high molecular bonding ABS produced in Austria. Our long time experienced showed that a 30 degrees sidewalls we use in all our snowboards increase power transfer over the edge and offer better vibration damping.

LAMINATION

#### HIGH DENSITY RIAX FIREDGI ASS

Our lightweight high density premium biaxial laminates not only possess all the advantages of our standard biaxial laminates but also provide additional stability, offer over 10% more pop and over 5% more torsional and longitudinal stiffness comparing to the standard laminates.

#### TRIAX FIREDGI ASS

Light-weight, multi axis, stitched fiberglass laminate that provides excellent torsional and longitudinal rigidity, great pop and response for a precise

### **CLASSIC CAMBER PROFILE** Our classic camber snowboards have 15 mm of camber underneath. It offers a very good edge control. The camber shape provides

precision turning on finely groomed runs of hard-packed snow but also offers increased hold in the half pipe as it can bend with the curvature of the ramp walls. The unique shape of the camber snowboard has the ability to absorb the landing impact of high-altitude tricks

### **CAMROCKER PROFILE**

Micro camber between the bindings, with rocker in the tip and tail from the bindings out. One of the key advantages this board profile is its advanced performance on slopes that are covered with freshly faller snow. The unique shape of our 3-Stage Rocker design permits the snowboard to rock back and forth during jibbing tricks but it's also great for beginners as it helps prevent you from catching an edge.

### **FLATROCKER PROFILE**

Flat section between the bindings, with rocker in the tip and tail from the bindings out. The flat part of the board offers better edge grip than rocker and better maneuverability than camber. The rocker sections bring the tip and tail up and off the snow, shortening the contact length of the edges and making turns easier. Your ride becomes more nimble and maneuverable. You can slash the snow, slide sideways to scrub speed, smear and butter turns.

Flat, also called zero camber, combines the benefits of both - rocker and camber. It makes easy transitions, with better edge grip than rocker and better maneuverability than camber. It's a versatile option, super stable for riding rails, due to the flat surface between the bindings. It requires less ollie force to get it in the air compared to a traditional board.

#### **FULL ROCKER PROFILE**

Full Rocker, It's a good choice for those riders who like riding in the park. It's a versatile option, super stable for riding rails It requires less ollie force to get it in the air compared to a traditional board, is more manoeuvrable and less likely to catch an

#### HYBRID ROCKER PROFILE

It's a good choice for those riders who like the best of both worlds. Reverse camber between the feet keep it loose, playful and floaty, while positive camber in the nose and tail deliver a ton of pop and stability and edge hold. Camrocam offers great float in powder and a catch-free freestyle performance. It feels more like a rockered board than a cambered board when you ride it.

### **HYBRID CAMBER PROFILE**

It offers great ollie-pop, is more forgiving than the classic camber profile and allows quick and grippy edge-to-edge turns.

### **REVERS CAMBER PROFILE**

The lowest point of the profile is the center of the board and both tips raise from the snow. There are many benefits of riding such a camber. The contact points raise above the snow and make the board less likely to catch an edge. The board feels more forgiving and pivots easily. Turn initiations are smoother and powder floatation is enhanced. Reverse cambers are also great for freestyling. They boost the playful feel and make pressing and jibbing easy.

### **ULTRA EDGE HOLD**

Our technology combines two intersecting sidecuts with additional contact points. The additional contact points arcs are located just outside the binding mounting area. They add quickness and control at slow speeds, and edge control at high speeds.

BASE

REINFORCEMENT

FLEXIBILITY

#### **EXTRUDED BASE**

Extruded bases are easy and cheap to maintain. They do not need to be waxed much. We only use the best quality Austrian bases made by the leading company

#### **CARBON STRINGERS**

Carbon stringers are added to selected models to improve pop, torsional stiffness and to add response to your edges and your

#### **BOARD FLEX**

Our board flexes are based on a scale of soft - stiff

#### **DIRECTIONAL SHAPE**

The binding inserts are set back, the flex is uneven, the sidecut is progressive, the tip and tail are different width and length.

#### **TWIN SHAPE**

The binding inserts are set back, the flex is even, the sidecut is radial, the tip and tail are exactly the same width and length.

### **DIRECTIONAL TWIN SHAPE**

The binding inserts are set back, the flex is even, the sidecut is radial, the tip and tail are exactly the same width but the nose is longer than the tail.

### **TRUE TWIN SHAPE**

A true twin shape means the board is 100% symmetrical - the stance is centered. the flex is even, the sidecut is dual-progressive, the tip and tail are exactly the same width and length.

# **PURE MINT**

### ALLMOUNTAIN / FREESTYLE

Everything about this board was designed to make snowboarding a pleasure. It is constructed with a nrevers camber shape combined with poplar core and easy to repair extruded base. It won't let you down on the slopes and might just become your best winter buddy.

## **DESTINY**

### ALLMOUNTAIN / FREESTYLE

If we had to choose one womens board to ride all season from this year's collection it would be the Destiny. Destiny is the classic Full Rocker all-mountain snowboard. It's has a medium-soft-flex that's great for riding at groomed slopes, in deep powder and is fun in the park. It's simply a perfect choice for riders who need one board for all conditions.

O7 SNOWBOARDS

# **INFINITY**

### **ALLMOUNTAIN / FREESTYLE**

There are infinite ways to express yourself on a snowboard, but the Infinity is unique. It's a soft true twin tip snowboard, with a flatrock profile that will surprise you with its versatility. It has nice pop and stability for clearing obstacles in the park and its friendly flex makes it your best pal during the most sophisticated ground tricks. The infinity is a board with limitless possibilities. But there's more. Instead of the traditional nasty, toxic lacquered topsheet, Infinity has a polycarbonate laminate that is extra hard, lightweight and difficult to scratch. So, Infinity is environmentally friendly as well as being noticeably lighter than traditional boards.

## **STYLE PINK**

### ALLMOUNTAIN / FREESTYLE

According to Charles Bukowski 'style is the answer to everything'. Some people ride with natural style, others work hard to get it. But in either the right equipment helps, which is why we created the Style. Style is a universal snowboard with a flatrock profile that is great for riding. In addition, it's got additional biax lamiation layer in both tips, which help you progress in the park and will bring you joy on powder days.

### **AVAILABLE LENGTHS:**

# **VENUS**

### ALLMOUNTAIN / FREESTYLE

Exactly as soft as Infinity and built with the same flatrock profile, Venus is well-suited to female riders. It's a perfect board for those learning the basis and who don't yet know what turns them on most: park, powder or piste. Venus is a versatile board that let's you try everything. Every year it has the most fashionable colors but this season it's also eco-friendly with a polycarbonate laminate topsheet instead of traditional lacquered topsheet. This makes the Venus lighter than traditional boards, but also extra hard and difficult to scratch, whilst being good for the planet.

MEDIUM BOARD Flex

## SUPREME BLACK/MINT

### ALLMOUNTAIN / FREESTYLE

If the Raven Relict is a little bit too stiff for you, then ride a Supreme. It's got a flatrock profile, but it's a bit softer in flex, which makes it a perfect choice if you ride piste as much as the park. Instead of the traditional environmentally unfriendly lacquered topsheet, Supreme has a polycarbonate laminate, which is light, extra hard and difficult to scratch. Making the Supreme both environmentally friendly, and lighter than most traditional boards.

# SATINE

### ALLMOUNTAIN / FREESTYLE

This board performs in practically all conditions because it's a camrocker hybrid. The symmetrical shape and poplar core make it the perfect choice for anyone who loves big jumps and pipe riding. And it offers a great edge hold too. It's a true universal all-mountain board.

## SUPREME BLACK/GREEN

### ALLMOUNTAIN / FREESTYLE O MENS

If the Raven Relict is a little bit too stiff for you, then ride a Supreme. It's got a flatrock profile, but it's a bit softer in flex, which makes it a perfect choice if you ride piste as much as the park. Instead of the traditional environmentally unfriendly lacquered topsheet, Supreme has a polycarbonate laminate, which is light, extra hard and difficult to scratch. Making the Supreme both environmentally friendly, and lighter than most traditional boards.

RAVEN SNOWBOARDS 2022/2023

# LION

### ALLMOUNTAIN / FREESTYLE OF MENS

Lion delivers the all mountain feel with a smooth edge to it. Versatile and forgiving level camber paired with the biax laminate is just the right mix to keep you in control in many conditions. Finished with the low maintenance and consistent speed of the Extruded base makes for memories and fun out on the snow.

BOARD Flex

## **RELICT**

### ALLMOUNTAIN / FREESTYLE O MENS

This board is called the Relict because nowadays it is rare to find a board that's great to ride, made simply and doesn't cost a fortune. You'll be surprised by the ease with which Relict is controlled. It's got decent edge hold, as well as nice pop. On the inside the board is as reliable as it gets: poplar wood, dual-axis high-density laminates, and a high quality and easy to repair base. Relict is a perfect choice for riders who love all conditions but only want one board. And there's an added bonus too. Instead of the traditional 'toxic' lacquered topsheet, Relict has a polycarbonate laminate that's extra tough and scratch resistant, making Relict environmentally friendly. It's also noticeably lighter than traditional boards.

# **SHAPE**

### ALLMOUNTAIN / FREESTYLE O MENS

Shape has duly carried on the tradition of the RVN model, combining a medium-soft flex with the stability of a flat-rock profile. This board is designed for those who've recently started their snowboarding adventure and want to develop their skills. It also won't disappoint more experienced riders looking for an easy and inexpensive board for the snow park and the piste.

TECHNOLOGIES:

BOARD Flex

# CORE

If we had to choose one board to ride all season from this year's collection it would be the Core. It's has a medium-flex that's great for riding at high-speed, in deep powder and is fun in the park. The Core is available in two versions: classic and carbon. The classic is a perfect choice for those taking their first steps in snowboarding or who only hit the slopes from time to time. It also offers additional contact points (Ultra Edge Hold Technology) along the edge for best available edge hold. Carbon is for more experienced riders who need one board for all conditions.

### **AVAILABLE LENGTHS:**

150 154 157 159w 163w 166w

32 SNOWBOARDS

## **ELEMENT CARBON**

### ALLMOUNTAIN / FREESTYLE O MENS

Whether you're in deep snow or on groomed slopes, this versatile, all-mountain board can be guaranteed to deliver. The x-carbon, placed beneath the wood-core, increases pop, stability and torsional strength, and with fast turn initiation and top-class edge grip, Element whacks you out of each turn with bags of power. A snowboard that will push you to the limit - expect faster speeds and bigger turns.

# **PULSE**

#### **ALLMOUNTAIN**

This year Pulse appears in our collection as a camrocker board for fast riding on and off piste. No other profile combines great float in powder and good edge hold better than the camrocker. We could leave it there but then you wouldn't know that unlike many boards of this sort, Pulse has a nice, medium flex which is fun to ride but won't

45 SNOWBOARDS SPECIFICATION RAVEN SNOWBOARDS 2022/2023

## **BINDINGS TECHNOLOGIES**

HIGHBACK

#### **REAR ENTRY**

Often called speed entry, allows you to quickly and easily get in your bindings. Simply open the highback, slide your foot in and then close the highback on your boot.

#### SYMMETRICAL HIGHBACK

Classic symmetrical highback.

## HIGHBACK FORWARD LEAN ADJUSTMENT

With this system you have more control over response of your bindings. The more you lean the highback forward, the more response you will get.

#### **ASYMMETRICAL HIGHBACK**

With these bindings you will get the most comfort and response when using the 'ducked' stance, when your feet are not parallel, but slightly pointing towards the nose and tail of the board.

## HIGHBACK ROTATION ADJUSTMENT

Rotate your highbacks to achieve maximum response and comfort.

#### **ALUMINIUM BUCKLES**

Buckles made with very durable, ultra-lightweight aluminum.

#### **COMPOSITE BUCKLES**

BUCKLES

Buckles made with durable, lightweight composite material.

#### MICRO BUCKLES

Fluent adjustment system allows you to get the perfect fit.

#### **4X4 MOUNT SYSTEM**

Standard mount system where holes are 4 cm apart. Uses a 4 hole disc binding.

#### **3D MOUNT SYSTEM**

TOE STRAP

MOUNT SYSTEM

Burton standard that requires a 3 hole disc binding.

#### THE CHANNEL MOUNT SYSTEM

The newest Burton standard that utilizes a rail to mount the binding.

#### **CLASSIC TOE STRAP**

Standard strap that holds the boot from the

#### CAP-STRAP

Toe cap wraps around the front of your boot reducing pressure points and giving more response

#### **MULTI CAP-STRAP**

These straps can be set in both positions: classic 'over the top' or modern 'over the toes'. You can adjust them to your personal preference.

## 3D ULTRALIGHT TECH CAP-STRAP

3D shape for the perfect fit with reduced weight for maximum response.

#### 3D ADVANCED FIT CAP-STRAP

3D shape that eliminates pressure points for enhanced comfort.

#### **3D ANKLE STRAP**

3D shape that eliminates pressure points for enhanced comfort.

#### INVERTED ANKLE STRAP

Comes with the seam on the outside providing more comfort.

#### **DOUBLE FLEX TECHNOLOGY**

Flip the strap upside down to switch the upper and lower stiffness levels and optimize it to your personal needs.

#### **ULTRALIGHT ANKLE STRAP**

Reduced weight for maximum response.

#### **MOUNTAIN ANKLE STRAP**

Wide strap with extra support, optimized for big mountain riding.

#### ALUMINIUM BASE

Base made with very durable, ultra-lightweight aluminum.

BASE

#### COMPOSITE BASE

Base made with durable, lightweight composite material.

#### FOOT BED RUBBER PADS

Rubber pads provide grip and cushioning.

#### **FULLY PADDED FOOT BED**

Foot bed fully padded for maximum cushioning and comfort.

GAS PEDAL

## ADJUSTABLE FRONT/REAR GAS PEDAL

Adjusting gas pedals lets you accommodate larger boots, reducing toe drag and giving more power and response.

## ADJUSTABLE HEEL CUP

Heel cup that provides an easy way to center your boots over the board.

#### **BINDING FLEX**

The flex of your bindings should correspond with the flex of your boots and snowboard. Choose one based on your riding style!

## RAVEN \$230 CLASSIC SERIES
